

EAGLE PRESS

FORMING THE FUTURE

STRAIGHT SIDED ECCENTRIC LINK

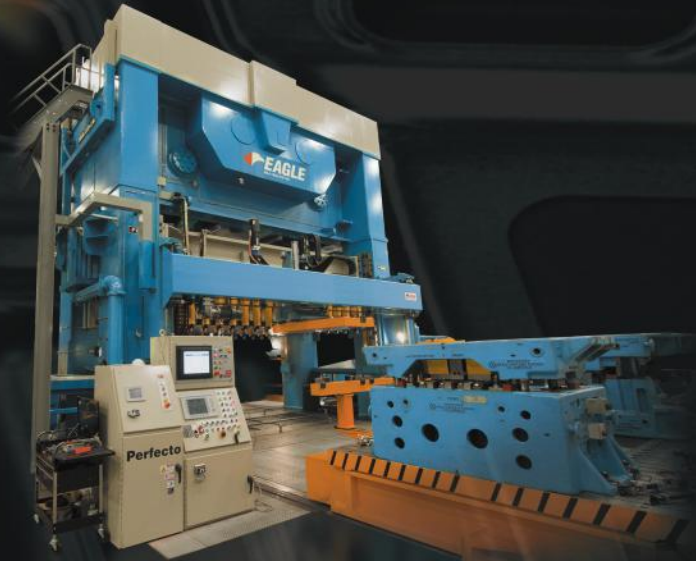

SEL4-2200-240-98

Eagle's SEL press series expands the Eagle production line to include a link drive design.

This optimizes press productivity through higher press slide speeds during the non-working portion of the press stroke, while maintaining a controlled, slower slide velocity through the working portion of the stroke.

These machines can be designed from 200 to over 3500 + tons in capacity, with velocity profiles custom engineered to suit your specific forming requirements. The SEL series offers all of today's high-tech options, including:

- automatic counterbalancing
- soft clutch and braking
- variable speed drives
- programmable cams
- hydraulic overloads
- tonnage monitor
- rolling bolster
- transfer and feeder integration
- ADC (uni or bidirectional)
