EAGLE SERVO PRESSES

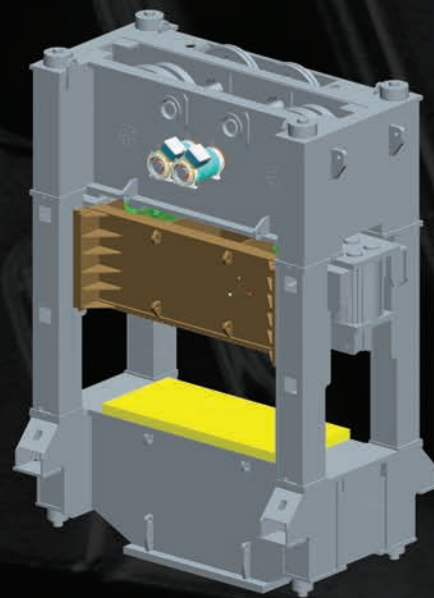

PELT SERIES

Eagle Servo Press technology is substantially more energy efficient than traditional hydraulic or mechanical presses. Our low torque series (PELT & SELT models) are revolutionary in form and function. Designed to be interfaced with conventional and robotic loading systems, our servo series presses are versatile, powerful and efficient with low maintenance and compact design features.

The Eagle High Torque series (SEHT models) allows maximum flexibility, with programmable stroke (pendulum), velocity and dwell profiles. This series utilizes high torque/low rpm servo motors with a complete management system to optimize power consumption. A Rigid steel construction allows Eagle Presses to perform under the most stringent conditions. Cold & Hot Forming processes are easily achieved using our revolutionary "Hybrid" design. All Eagle Press products are custom designed to meet customer specifications and requirements.
