

HYDRAULIC PRODUCTION PRESSES

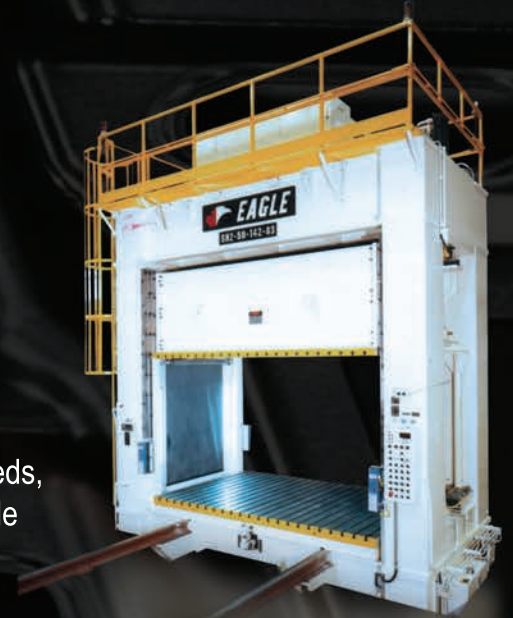

EAGLE PRESS

& Equipment Co. Ltd.

SH2-300-96-60

Eagle hydraulic production presses address the requirement for a constant pressing force in applications such as deep draws, mold, die spotting, plastic production, acoustical material forming and insulation.

SH2-50-142-83

As hydraulic cylinders supply the pressing force, many of the constraints with a fixed mechanical linkage disappear. State-of-the-art control packages combined with integrated hydraulic circuit blocks allow faster speeds, promoting the use of hydraulic presses as an acceptable alternative to traditional mechanical presses.

Like the tryout and spotting press, these machines are available in both post-type or straight-sided gib-guided frame construction.
